

City of Saint Paul Traffic Study Results

Here are the results of the speed and volume studies done on Pelham in March of 2010:

Between Doane and Beverly:

NB

ADT was 1662 vehicles per day; Average speed was 31 mph and 85% speed (means 85% of traffic going that speed or below was 35 mph.

SB

ADT was 1,905 vehicles per day; Average speed was 30 mph and 85% speed was 34 mph.

Between Beverly and Desnoyer:

NB

ADT was 1,812 vehicles per day; Average speed was 34 mph and 85% speed was 39 mph.

SB

ADT was 2,275 vehicles per day; Average speed was 35 mph and 85% speed was 39 mph.

Study results do indicate some speeding. Total ADT is 4,087. Since Pelham is a collector and 85% speed is 39 mph, it meets the criteria for a temporary speed display sign. I can request it be put on the list for next spring.
